

SAM HENDERSON

PROFILE

I work in the game industry as a technical developer. I specialize in game development, and I have skills in working on broader software development, like my work on a Spreadsheet and a Sprite Editor program, each from scratch.

CS SKILLS

- Algorithms
- AI
- C, C++, & C#
- GameMaker
- HTML, CSS, & JS
- Java
- Kotlin
- Python
- SQL

TECH SKILLS

- Adobe, Google, & Microsoft Office Suites
- GitHub
- Trello
- Unity
- Unreal

OTHER SKILLS

- Calculus
- Human-Centered Design
- Fast Learner
- Leadership
- Linear Algebra
- Organization
- Scrum
- Teamwork

HOBBIES

- Writing & Design
- Gaming
- Drawing
- Reading
- Tabletop RPGs

PROJECTS

Spreadsheet

January 2022 - March 2022

- Spreadsheet program that a partner and I worked on from scratch.
- Spreadsheets are displayed in an executable window where you can edit cells, enter and evaluate formulas, save and load spreadsheets, and work on multiple simultaneously.
- I was mostly responsible for implementing core functions while my partner did much the debugging.

Sprite Editor

November 2022 - December 2022

- A sprite editor allows you to draw sprites on a pixel grid.
- The user can paint, erase, and work on multiple layers, even animating them.
- In addition, the user can save and load the project.
- My role on the team was to work on animation aspects, such as the onion skinning.

Overstimulation

September 2022 - December 2022

- A Game Maker dating simulator where a player is an autistic man attempting to have the date go well without his symptoms interfering.
- It is meant to be an alternative piece meant to give a message to the players and portray an experience.
- I worked on mechanics such as a focus blur that forces the player to mouse scroll repeatedly to see the dialogue, timed responses, the game choosing options for you based on interest, etc.

God Only Knows

January 2023 - May 2023

- A Unity Engine first-person horror game in a PlayStation 1 style with investigation and collection-based gameplay.
- It features an inventory and note collection system as core mechanics.
- I was the lead programmer on this project, and the other programmer had limited English. Despite this, we worked together wonderfully through patience and respect for each other.

Syke!

August 2023 - May 2024

- An Unreal Engine first-person puzzle game in an MC Escher-inspired world with gravity mechanics, portals, and non-Euclidean geometry.
- I was a programmer on this team who has primarily worked on the portals, journals, puzzle chains, and level polish.

EMPLOYMENT HISTORY

- Delivery Associate at Logical Delivery
- Technician at Dave and Busters
- Virtual Assistant at Davinci Virtual

- August 2024 - May 2026
- August 2023 - May 2024
- September 2022 - August 2024
